Product Design Analysis

After reading the raw Qualtrics data, I observed that many people listed finding classes at their skill level as a frustration; it's intended as a main feature in HobbyLoop to be able to sort classes by level, but I realized that it wasn't made obvious in our wireframes. Some people were also confused about the different profile pages and usernames in differentiating which one was for students and which one was for teachers. In addition, there were questions about the difference between the forum and the poll. To address these issues in our product design, we will have to make the high-fidelity wireframes and prototype more detailed or design the student/teacher pages differently. We may also want to reconsider the flow of the frames.

Executive Summary

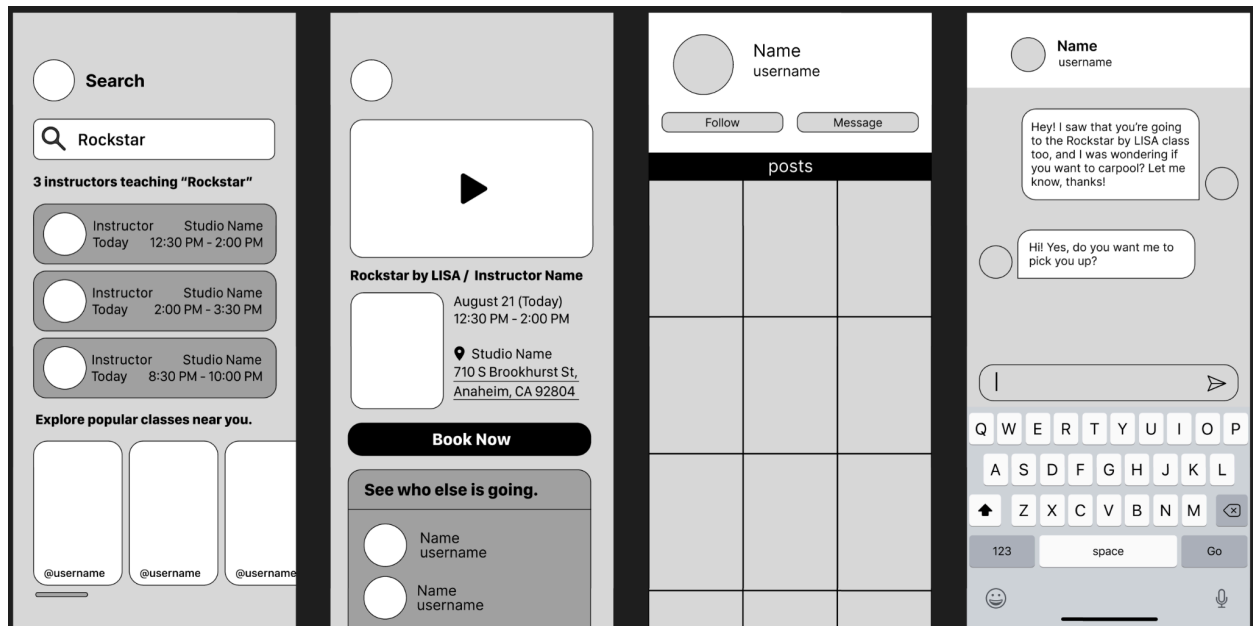

Description of User Issue	Team Recommendation
The name reminded some participants of the arts and crafts chain store Hobby Lobby, which makes them assume.	Emphasize our HobbyLoop branding and market the “Be in the loop for your favorite hobbies” tagline.
Some participants did not have a clear idea as to the purpose of the “See Who Else is Going” feature on the class page (e.g., they did not know they could click on the profiles)	Revise the design of the profile buttons to either be button shaped or underlined like a hyperlink.
Participants automatically think this app will consist of multiple hobbies given the name.	Include a screen with multiple hobbies to choose from towards the beginning of the prototype.
Participants were confused on why first frames say forum but it goes into a poll and if this should just be called a poll instead of forum.	We can replace the forum with profile notes where users upload what they want to learn and the app takes that data to find the most wanted dance. We can also design the poll feature to be shareable to Instagram, but we would have to partner with Instagram for them to make it an in-app poll and not a link to open in an external browser.
Participants did not realize that they are able to filter their search by difficulty.	We will make sure to include this flow in the prototype so that it is clear to users that this is a possible search filter. We could also add tooltips or tutorials in the app to guide them.
Participants had a hard time differentiating between dance student profile pages and dance instructor profile pages.	We can include an indicator such as a “Student” or “Teacher” tag next to the profile name and username, and we can color code it as well.
Participants noted that the interface feels busy and confusing to navigate/read.	Prioritize information hierarchy and establish a simple yet attractive design system.
Participants expressed the desire for a way to gauge which classes are worth going to.	We can consider implementing a rating system for teachers/classes/studios.

VVP Questions

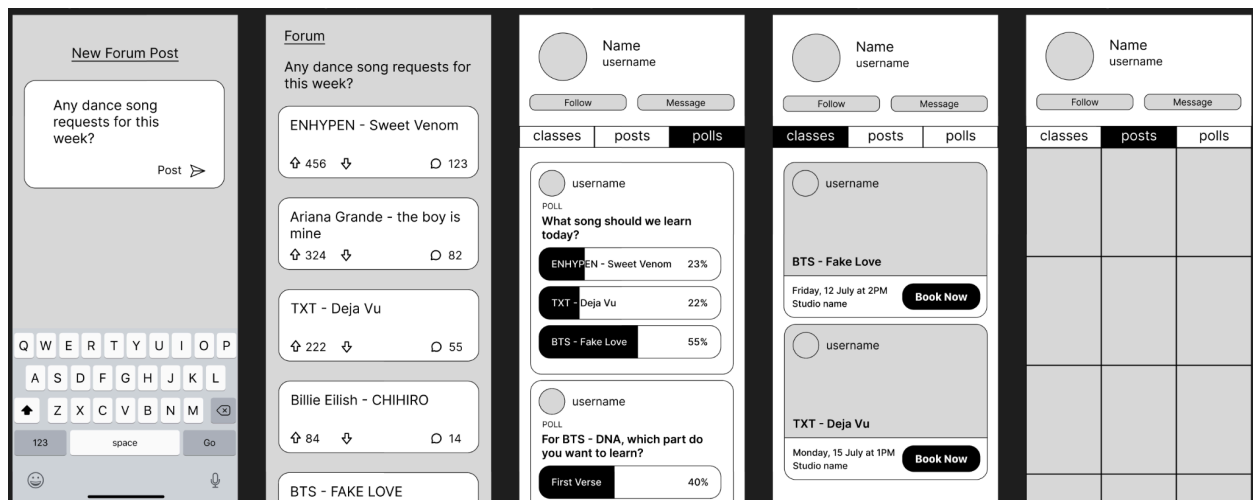

1. What do you think HobbyLoop does?
2. Who do you think HobbyLoop is for?
3. What are 3 things you could do with HobbyLoop?
4. On a scale from 1-5 do you think HobbyLoop would bring you value, personally (1 = no value, 5 = great value)?
5. On a scale of 1-5 do the visuals make it feel like a product you would actually use?

Wireframes of Key User Stories

6. What do you think this interface will allow you to do?
7. If you were to rate the navigation between these frames, what score would you give from a scale of 1 to 5 (1 = confusing, 5 = easy to understand)?
8. What task(s) do you want to accomplish by seeing these frames?

9. What do you think this interface will allow you to do?
10. If you were to rate the navigation between these frames, what score would you give from a scale of 1 to 5 (1 = confusing, 5 = easy to understand)?
11. What task(s) do you want to accomplish by seeing these frames?

Additional Questions

12. How important are these elements to you when going to dance classes on a scale of 1 to 5 (1 = not at all important, 5 = extremely important)?
 - a. Song choice
 - b. Instructor
 - c. Genre
 - d. Studio

13. How useful are each of these features for dance classes on a scale of 1 to 5 (1 = not at all useful, 5 = extremely useful)?
 - a. Searching for classes
 - b. Requesting for a specific song to be taught in dance class
 - c. Voting for a song to be taught in dance class
 - d. Interacting with others who are taking the same class before going to class

14. What pain points do you have as a dancer/hobbyist?
15. Do you consider dance as a hobby? If not, what would you consider it as?
16. What do you think of the app name and tagline "HobbyLoop: Be in the loop for your favorite hobbies"?
17. Do you think this app should be marketed as a dance only app or a multiple hobbies app?
18. If this were to be a dance only app, what name and tagline suggestions do you have?
19. Are there any additional features that you would like to see implemented in this app?
